I.2 Tablou macroeconomic

Economia Romaniei a inregistrat in anul 2017 cel mai accelerat ritm de crestere din anul 2008, incheind anul cu un avans al PIB-ului de 7% intr-un context extern favorabil, influentat de climatul din Zona Euro (principalul partener comercial) si de mix-ul pro-ciclic de politici economice, la nivel intern.

Accelerarea economiei a fost determinata, in principal, de contributia cererii interne. Se remarca cresterea consumului privat (principala componenta a PIB), datorita venitului disponibil al populatiei si al climatul pozitiv al pietei creditului (sustinut de nivelul scazut al ratelor de dobanda).

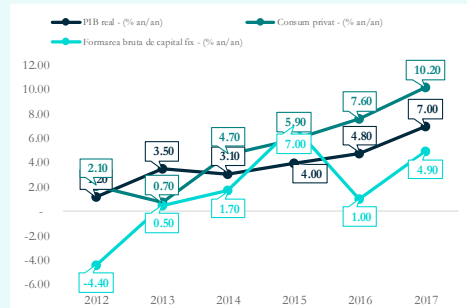

Banca Nationala a Romaniei (BNR) a continuat ciclul monetar post-criza, mentinand dobanda de referinta la valoarea de 1.75% in perioada 2015-2017.

Consumul public a crescut pentru al patrulea an la rand, inregistrand o dinamica pozitiva de 1.6% in anul 2017.

Preturile de consum masurate prin indicele armonizat UE al preturilor de consum (IAPC) au inregistrat o dinamica anuala negativa fiind influentate de scaderea cotelor TVA (la alimente si servicii de alimentatie de la 24% la 9% incepand cu 1 iunie 2015 si a cotei generale, de la 24% la 20% incepand cu 1 ianuarie 2016), evolutiile de pe piata valutara, dinamica cotațiilor internationale la titei si performanta cererii interne.

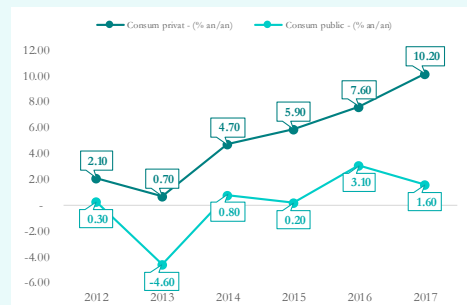

In anul 2017 preturile de consum au inregistrat un avans puternic pe fondul evolutiei economiei la un ritm peste potential, liberalizarea preturilor la energie, fluctuatiile din pietele internationale de materii prime si deprecierea monedei nationale

Exporturile nete (exporturi – importuri) au avut o contribuție negativă la formarea PIB deși cererea externă a beneficiat de un avans puternic datorită climatului favorabil din Zona Euro, fiind ameliorat de dinamica superioară a importurilor, ce au satisfăcut cererea internă.

Avansul importurilor a condus la intensificarea deficitului balanței comerciale, în contextul în care cererea internă depășește oferta de produse și servicii, înregistrând cel mai ridicat nivel post-criză.

Climatul pozitiv din piața forței de muncă s-a consolidat beneficiind de o evoluție pozitivă a ciclului investițional post-criză, fiind influențat de migrația populației active și diminuarea ponderii economiei informale. Rata somajului a atins la finalul anului 2017 valoarea de 4.9%, înregistrând cel mai scăzut nivel din perioada analizată.

Indicele sentimentului economic realizat de către Comisia Europeană a înregistrat un trend ascendent în perioada analizată, atingând valoarea maximă în luna Mai 2017 ca urmare a evoluției pozitive a economiei. Spre finalul anului 2017 înregistrează valori mai scăzute pe fondul așteptării decelerării ritmului de creștere economică.

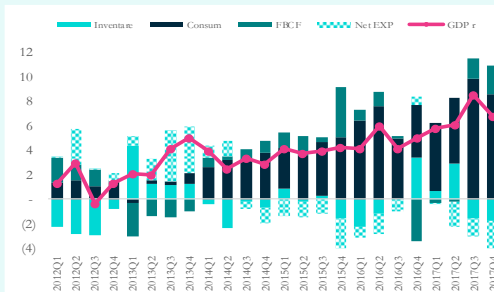

Indicele “încrederea consumatorilor” a înregistrat de asemenea un trend pozitiv în perioada analizată, accentuându-se începând cu anul 2015, o dată cu reducerea cotei TVA și a creșterilor salariale. Începând cu a doua jumătate a anului 2017, indicele înregistrează scăderi pe fondul anticipărilor inflaționiste și a incertitudinilor privind politica fiscală.

Indicele încrederii industriale a înregistrat un trend ascendent datorită climatului extern favorabil și creșterii cererii interne.

Indicele încrederii în comerț a avut o evoluție pozitivă, atingând valoarea maximă în luna Iunie 2015 pe fondul reducerii cotei de TVA.

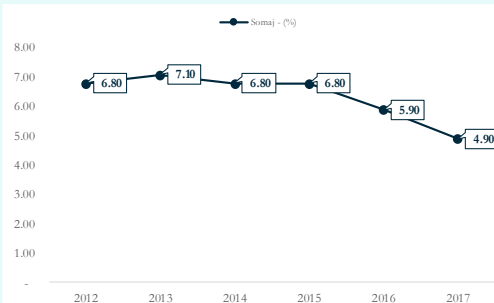

Indicele încrederii în construcții, a înregistrat un avans beneficiind de un climat pozitiv intern al pieței creditării și a veniturilor disponibile ale populației.
